EDUCATION

Wentworth Institute of Technology — Boston, MA Expected Graduation: 08/2028
Bachelor of Science in Computer Science

Related Courses: Data Structures, Databases, Network Programming, Computer Organization, Discrete Mathematics

SKILLS

Languages & Frameworks: Ruby on Rails, TypeScript, JavaScript, Node.js, Next.js, Java, Python, Swift, SQL, C
Infrastructure: Linux, NixOS, Docker, Proxmox, Active Directory, Ansible, GitHub Actions, Grafana/Prometheus
Platforms: ServiceNow, Power Platform (Power Apps, Power Automate, Power BI), Microsoft 365, Google Cloud, Stripe

PROJECTS

Homelab — Multi-Tenant Infrastructure (Individual) 08/2026 – Present

- Built a multi-tenant Proxmox lab with three isolated Active Directory forests, VLANs, and zone-based firewall rules.
- Run a two-tier PKI per tenant with offline root CAs, and WPA-Enterprise Wi-Fi through NPS.
- Deployed a Wazuh SIEM, NetBox with automated network discovery, and Grafana/Prometheus monitoring.
- Manage servers as code with Ansible and NixOS, with secrets in Ansible Vault and agenix.

WIT-Calendar — Rails API + Chrome Extension (Team, Lead Backend Developer) 10/2025 – Present

- Chrome extension that syncs Wentworth class schedules to Google Calendar, Outlook, and Apple Calendar
- Built Rails API with background jobs for nightly calendar sync, OAuth token refresh, and catalog import
- Integrated Google Calendar and Microsoft Graph APIs, with OAuth sign-in, passkeys, and Google RISC events
- Deployed with Docker on NixOS, with CI/CD in GitHub Actions and Prometheus/Grafana monitoring

EXPERIENCE

Wentworth Institute of Technology — Digital Innovation Support Specialist 05/2026 – Present

- Support campus technology projects for the Digital Transformation & Collaboration (DxC) team.
- Built documentation, data migration, and change request for the ServiceNow Asset Management go-live.
- Develop Power Platform solutions, including the TechSpot check-in kiosk and a course manual compliance audit.
- Administer ServiceNow inbound email actions and watch-list automation for TechSpot and ATLAS queues.

Major League Hacking — Remote — Software Engineer Intern 05/2025 – 08/2025

- Built the Discord integration for the MyMLH identity platform in Ruby on Rails.
- Designed role entitlements with a state machine and background jobs that grant Discord roles automatically.
- Built Avo admin tools for Discord roles, with access policies and a one-click resync of all roles.
- Merged 50+ pull requests across 26 Jira tickets in two-week sprints with code review and tests.

The Hack Foundation — Shelburne, VT — Gap Year / Software Engineer 10/2023 – 07/2024

- Merged 60+ pull requests across 20 Hack Club repositories, including the HCB fintech platform (Rails).
- Managed DNS as code for hackclub.com and related domains with octoDNS and GitHub Actions.
- Built and led a community welcome team of 10 that onboarded new members to the Hack Club Slack.
- Improved the Slack bot for the club pizza grant program with email verification and channel reactions.

ACTIVITIES

Wentworth University Coding Club — Member 09/2025 – Present

- Served on the E-Board as Treasurer (2025–2026): managed the club budget and coordinated events and meetings.

Wentworth Robotics Club — Member 09/2025 – Present

- Served as Treasurer and Software Team Lead (2025–2026): managed the budget and led the battlebot software team.
